

RAVIKANT WAGHMARE

Full Stack Software Engineer | Agentic AI & RAG Systems

Hadapsar, Pune, Maharashtra 412307 | +91 9527142826 | ravikantwaghmare82@gmail.com | linkedin.com/in/ravikant-waghmare | github.com/raviw45

SUMMARY

Full Stack Software Engineer with 2.7+ years of experience shipping AI-powered SaaS products in React.js, Next.js, Node.js, and TypeScript. Increased user engagement by **30%**, cut code duplication by **35%**, and reduced manual processing effort by **50%** by building Agentic AI workflows, Retrieval-Augmented Generation (RAG) pipelines with LangChain, and OpenAI LLM integrations through MCP servers and prompt engineering. Uses a structured two-model Claude workflow (Opus for planning, Sonnet for implementation) to build and ship faster. Awarded "Team of the Quarter" for engineering impact.

TECHNICAL SKILLS

AI & Agentic Systems: OpenAI, Claude AI (Sonnet, Opus, Haiku), Agentic AI, Retrieval-Augmented Generation (RAG), LangChain, Vector Databases, Prompt Engineering, MCP Servers, Cursor AI, AI-Assisted Development (plan/implement model workflows)

Languages: JavaScript, TypeScript, Java, SQL, HTML, CSS

Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, Spring Boot, Hibernate, GraphQL, Redux, Mongoose, Prisma, Tailwind CSS, ShadCN UI

Databases: MongoDB, PostgreSQL, MySQL, Redis

Cloud & DevOps: AWS (EC2, ECS, Lambda, Amplify, Route 53, WAF), Docker, Kubernetes, Azure DevOps, Cloudinary

CI/CD & Tools: GitHub Actions, Azure Pipelines, Git, GitHub, Jira, Postman, VS Code

Concepts: REST APIs, Microservices, System Design, OOP, Authentication (JWT, RBAC, NextAuth), Agile / Scrum Methodologies

EXPERIENCE

Traveazy Group

Software Engineer

February 2026 – Present

Pune, India

- Increased user engagement by **30%** by developing and shipping production-ready, AI-powered SaaS features using Next.js, React.js, Tailwind CSS, and ShadCN UI.
- Consolidated registration, authentication, and account setup into a **single guided flow** by designing and implementing end-to-end user-management workflows with Clerk, replacing multi-step manual registration.
- Cut manual template-creation work by **over 50%** by building Agentic AI workflows and Retrieval-Augmented Generation (RAG) pipelines with OpenAI's models, integrated through Cursor AI and MCP (Model Context Protocol) servers, automating AI-driven template generation end to end.
- Accelerated feature delivery by **30-40%** by structuring development around a two-model Claude workflow — Claude Opus in plan mode for architecture and task breakdown, then Claude Sonnet for implementation — across the SaaS codebase.
- Reduced code duplication by **35%** by architecting TurboRepo monorepos with shared UI packages across multiple applications.
- Cut manual processing effort by **50%** by building AWS Lambda serverless pipelines for automated PDF data extraction.

Vionsys IT Solutions India Pvt. Ltd.

Software Engineer

February 2024 – January 2026

Pune, India

- Delivered end-to-end web solutions across **3 platform types** — CRM, educational, and construction — building and deploying modern, responsive, business-focused applications for each.
- Elevated usability, responsiveness, and performance of client-facing applications by **10-20% faster load times**, building high-performance React.js and Next.js interfaces with Tailwind CSS and ShadCN UI.
- Enabled seamless frontend-backend communication across **10-20 REST API endpoints/services** by integrating Node.js, MongoDB, PostgreSQL, and Prisma-based services, working directly with backend teams on service design.
- Standardized and accelerated deployments, cutting release time by **40-50%**, by configuring GitHub Actions CI/CD pipelines, containerizing applications with Docker, and supporting production deployments on AWS infrastructure.

PROJECTS

Travel Management SaaS Platform | Next.js, TypeScript, TurboRepo, Clerk, AWS

2026

- Architected a multi-tenant travel SaaS platform serving **5 distinct organization types** — B2B, B2B2B, agencies, branch offices, and white-labeled sub-agencies — through a hierarchical organization structure.
- Consolidated agency and user account creation into a **single guided flow** by building onboarding workflows with Clerk, replacing manual setup with a self-serve process.
- Streamlined operations across **4 travel verticals** — hotels, flights, trains, and transfers — by building notification and transfer-management interfaces.
- Reduced code duplication by **35%** and improved scalability across the platform's multiple applications by establishing a TurboRepo-based monorepo architecture with shared UI packages.
- Deployed and scaled the platform on AWS infrastructure to support **100-500 concurrent users** across the multi-tenant organization hierarchy.

CRM SaaS Platform | React.js, Next.js, PostgreSQL, Prisma

2025

- Streamlined business workflows for **3 user tiers** — administrators, staff, and end users — by building responsive dashboards, data-management modules, and reusable UI components in React.js, Next.js, Tailwind CSS, and ShadCN UI.
- Secured platform access across all 3 user tiers by integrating REST APIs and implementing role-based access control (RBAC).
- Ensured scalable application performance and seamless frontend-backend integration across all **3 user tiers** by collaborating with backend teams on Node.js, PostgreSQL, and Prisma-based services.

EDUCATION

CDAC, Bengaluru

PG-DAC (Post Graduate Diploma in Advanced Computing), Software Development

September 2022 – March 2023

Bengaluru, India

T.P.C.T's College of Engineering, Dharashiv (Osmanabad)

Bachelor of Engineering in Mechanical Engineering

July 2015 – June 2019

Maharashtra, India

ACHIEVEMENTS

Awarded "Team of the Quarter" for outstanding engineering contributions and delivery impact.
